ROAS trajectory — Google Ads × Shopee

Quarterly average ROAS. Dashed line = profitability (1.0×).

Channel ROAS, full year

Efficiency by channel (ratios). Loss-makers cut & reallocated.

Shopee revenue, first half vs second half (relative size)

How the turnaround was engineered

- ◆ Ran continuous A/B tests across audiences, creative, and bidding; shifted the campaign to a **Target ROAS** strategy once conversion data matured.
- ◆ Consolidated budget into the proven creative and the highest-intent audience, instead of spreading spend thin across formats.
- ◆ Diagnosed and **cut loss-making channels** (Meta Web, ROAS 0.02×) and reallocated budget toward Shopee, where unit economics worked.
- ◆ Rebuilt reporting in Looker Studio so channel ROAS, CTR, and funnel drop-off were monitored weekly — decisions were data-led, not guessed.

Absolute revenue, ad spend & account-level figures withheld. Available on request under NDA during a hiring conversation.
